

### **Amendments to the Claims**

Claim 1 (Currently amended):       A handheld personal communications device for voice and video communications comprising:

- a first body having a display;
- a second body having a plurality of manual inputs, the first body adapted for attachment to the second body, the personal communications device having an open position wherein the display of the first body and the manual inputs of the second body are accessibly exposed to face a user, the personal communications device having a closed position wherein the display of the first body is at least partially protected by the second body and the manual inputs of the second body are accessibly exposed to face the user;
- a video camera operatively connected to the second body such that in the closed position, the video camera faces the user and in the open position the video camera faces away from the user;
- a cellular transceiver in at least one of the first body or the second body; and
- a close range transceiver in at least one of the first body or the second body.

Claim 2 (Original):   The handheld personal communications device of claim 1 wherein the display includes a sub region viewable by the user in the closed position.

Claim 3 (Original):   The handheld personal communications device of claim 1 wherein the first body is removably attached to the second body and each of said first body and said second body includes a close range transceiver.

Claim 4 (Original):   The handheld personal communications device of claim 1 wherein the display is adapted to operate as a view finder associated with the video camera when in an open position.

Claim 5 (Original):   A system for personal voice and video communications, comprising:

- a handheld personal communications device comprising a first body having a display and a second body having a plurality of manual inputs, the first body adapted for attachment to

the second body, the personal communications device having an open position wherein the display of the first body and the manual inputs of the second body are accessibly exposed to face a user, the personal communications device having a closed position wherein the display of the first body is at least partially protected by the second body and the manual inputs of the second body are accessibly exposed to face the user, and a video camera operatively connected to the second body such that in the closed position the video camera faces the user and in the open position the video camera faces away from the user, the handheld personal communications device having a voice transceiver and a close range transceiver;

an earpiece comprising a bone conduction sensor operatively connected to a second close range transceiver for communication with the handheld personal communications device.

Claim 6 (Original): The system of claim 5 wherein the first body and the second body of the handheld personal communications device are removeably attached.

Claim 7 (Original): A method of providing video communications comprising:  
providing a device comprising a first body having a processor operatively connected to a display, a plurality of buttons, a voice transceiver, and a first close range transceiver and a second body having a video imaging device and operatively connected to a second close range transceiver, the first body removable from said second body;  
removing the first body from the second body;  
acquiring a video image with the video imaging device and transmitting the video from the second body to the first body;  
displaying the video image on the display of the first body.

Claim 8 (Original): The method of claim 7 further comprising storing a representation of the video image.

Claim 9 (Original): The method of claim 7 further comprising transmitting the video image using the voice transceiver.

Claim 10 (Original): The method of claim 7 wherein the second body further comprises a microphone operatively connected to the second close range transceiver.

Claim 11 (Original): The method of claim 10 further comprising transmitting audio from the second body to the first body.

Claim 12 (Currently amended): A personal communications device, comprising:  
a housing comprising a first body and a second body operatively connected to the first body, the second body having a first side and an opposite second side;  
the first and second body having an open position, a first closed position, and a second closed position;  
the first side of the second body openly exposed and the second side of the second body adjacent the first body in the first closed position;  
the second side of the second body openly exposed and the first side of the second body adjacent the first body in the second closed position;  
a voice transceiver disposed within the housing[[]] and  
a close range transceiver disposed within the housing.

Claim 13 (Original): The personal communications device of claim 12 wherein the first body is slidably hinged to the second body.

Claim 14 (Original): The personal communications device of claim 12 further comprising a first plurality of buttons on the first side of the second body and a second plurality of buttons on the second side of the second body.

Claim 15 (Original): The personal communications device of claim 12 wherein the first body includes a display.

Claim 16 (Original): The personal communications device of claim 12 further comprising a third body operatively connected to the first body;

Claim 17 (Original): The personal communications device of claim 16 wherein the third body is slidably hinged to the first body.

Claim 18 (Original): The personal communications device of claim 16 wherein the first and third body have an open position, a first closed position, and a second closed position.

Claim 19 (Original): The personal communications device of claim 16 wherein the third body has a first side and an opposite second side, and wherein the first side of the third body is openly exposed and the second side of the third body is adjacent the first body in the first closed position; and  
the second side of the third body openly exposed and the first side of the third body adjacent the first body in the second closed position.

Claim 20 (Original): The personal communications device of claim 16 wherein the third body includes a display.

Claim 21 (Original): The personal communications device of claim 12 wherein the second body includes a display.

Claim 22 (Original): The personal communication device of claim 12 wherein each of the first body and the second body includes a display.

Claim 23 (Original): The personal communications device of claim 12 wherein the first body is removeably attached to the second body.

Claim 24 (Original): The personal communications device of claim 12 wherein the first body includes at least one video camera.

Claim 25 (Original): The personal communications device of claim 16 wherein the third body is removeably attached to the second body.

Claim 26 (Original): The personal communications device of claim 16 wherein the third body includes at least one video camera.

Claim 27 (Currently amended): The personal communications device of claim 12 wherein the first body includes ~~[[a]]~~the close range transceiver and the second body includes a second close range transceiver.

Claim 28 (Currently amended): The personal communications device of claim 16 wherein the third body includes ~~[[a]]~~the close range transceiver and the second body includes a second close range transceiver.

Claim 29 (Currently amended): The personal communications device of claim 16 wherein the first body includes the close range transceiver and the~~[[,]]~~ second body includes a second close range transceiver, and the third body ~~each include~~includes a third close range transceiver.

Claim 30 (Original): The personal communications device of claim 16 wherein the second body includes at least one video sensor.

Claim 31 (Currently amended): A personal communications device, comprising:  
a housing comprising a first body, a second body, and a third body;  
the first body operatively connected to the second body, the third body operatively connected to  
the second body;  
a voice transceiver disposed within the housing~~[[.]]~~; and  
a close range transceiver disposed within the housing.

Claim 32 (Original): The personal communications device of claim 31 wherein the first body is hinged to the second body.

Claim 33 (Original): The personal communications device of claim 31 further comprising at least one of a display or a plurality of buttons associated with each of the first body, the second body, and the third body.

Claim 34 (Original): The personal communications device of claim 31 wherein the first body is slidably hinged to the second body.

Claim 35 (Currently amended): The personal communications device of claim 31 wherein the third body is hinged to the ~~third~~ first body.

Claim 36 (Currently amended): The personal communications device of claim 35 wherein the third body is slidably hinged to the ~~third~~ first body.
